

## **IF SKADEFÖRSÄKRING CHOOSES PACTUMIZE PLATFORM FOR FUTURE CONTRACT MANAGEMENT**

If, the largest property insurance company in the Nordic region, has chosen the LegalTech company Pactumize platform for a completely digital management of the insurance company's supplier contracts. The contract solution should be available to the entire Nordic business.

Pactumize Contract Builder is a SaaS platform for digitizing large and medium-sized enterprise contracts. The agreements are implemented by configuring a query flow with a very user-friendly interface. This allows all business users to design business contracts independently. Pactumize has previously implemented the platform, among others at the German company, Axel Springer, Europe's largest media group, which has used Pactumize since 2017. All types of agreements can be configured in the platform; both standard agreements and more complex agreements. In addition, Pactumize has also developed a solution for Transfer Pricing, a solution for managing corporate bonds and a solution that allows a buyer to formulate and negotiate agreements with a counterparty using configured and pre-approved contract clauses in a secure negotiation room (Pactumize Negotiation Room).

*- The agreement with If is our first implementation in the insurance industry and a fantastic confirmation that our SaaS platform is well suited for larger companies with operations in several countries, says Anders Perméus, CEO and co-founder of Pactumize. The collaboration with If under the pilot has worked perfectly thanks to a very well organized and driven project management.*

*- We see the investment in a modern digital contract management system as a natural step in If's ambition to be simple, both for us and our customers. With the Pactumize solution, we can review and sign agreements faster, while at the same time increasing the quality as all information is available digitally. This without compromising safety, says Jonas Fagerström, Purchasing Aftermarket Motor at If.*
